

**Texas State Soil and Water Conservation Board
 Clean Water Act §319(h) Nonpoint Source Grant Program
 FY 2015 Workplan 15-04**

SUMMARY PAGE	
Title of Project	Statewide Delivery of Riparian and Ecosystem Education Program
Project Goals	<ul style="list-style-type: none"> • Facilitate the promotion of healthy watersheds and improve water quality through the delivery of riparian and stream ecosystem education programs with a focus on priority watersheds. • Increase citizen awareness, understanding, and knowledge about the nature and function of riparian zones, their benefits, and BMPs to protect them and minimize NPS pollution. • Connect landowners with local technical and financial resources to improve management and promote healthy watershed and riparian areas on their land.
Project Tasks	(1) Project Administration; (2) Deliver riparian education programs; (3) TFS Participation in Riparian Team and Program Delivery (4) Evaluate the effectiveness of education programs
Measures of Success	<ul style="list-style-type: none"> • Deliver a 24 riparian education programs in prioritized watersheds. • Coordinate 2 statewide riparian conferences • Increased knowledge and understanding of riparian function and implementation of BMPs by individuals participating in the program, as measured by pre-/post-tests and post follow-up evaluation

Part I – Applicant Information

Applicant							
Project Lead		Dr. Kevin Wagner					
Title		Associate Director					
Organization		Texas Water Resources Institute					
E-mail Address		klwagner@ag.tamu.edu					
Street Address		2118 TAMU					
City	College Station	County	Brazos	State	Texas	Zip Code	77843-2118
Telephone Number		979-845-2649		Fax Number		979-845-8554	

Co-Applicant							
Project Lead		Nikki Dictson					
Title		Extension Program Specialist III					
Organization		Texas Water Resources Institute					
E-mail Address		n-dictson@tamu.edu					
Street Address		2118 TAMU					
City	College Station	County	Brazos	State	Texas	Zip Code	77843-2118
Telephone Number		979-458-5915		Fax Number		979-845-8554	

Co-Applicant							
Project Lead		Hughes Simpson					
Title		Program Coordinator II					
Organization		Texas A&M Forest Service					
E-mail Address		hsimpson@tfs.tamu.edu					
Street Address		200 Technology Way, Suite 1281					
City	College Station	County	Brazos	State	Texas	Zip Code	77845-3424
Telephone Number		979-458-6685		Fax Number		979-458-6655	

Project Partners	
Names	Roles & Responsibilities
Texas State Soil and Water Conservation Board (TSSWCB)	Provide state oversight and management of all project activities and ensure coordination of activities with related projects and TCEQ.
Texas Water Resources Institute (TWRI)	Provide overall program management including project coordination, submission of quarterly and final reports, marketing, registrations, delivery of riparian education programs, website development and management, and evaluation of program effectiveness.
Texas A&M Forest Service (TFS)	Riparian Team Member: Assist with program development, marketing, and delivery; assist with information on quarterly and final reports.
Texas A&M AgriLife Research and AgriLife Extension	Riparian Team Members: Assist with program development, marketing & delivery.
Texas Parks and Wildlife Department (TPWD)	Riparian Team Member: Assist with program development, marketing & delivery.
Nueces River Authority (NRA)	Riparian Team Member: Assist with program development, online tools marketing, and delivery.
USDA-Natural Resource Conservation Service (NRCS)	Riparian Team Member: Assist with program development, marketing, and delivery.
Texas Riparian Association (TRA)	Host Website; Riparian Team Member: Assist with program development, marketing, and delivery.
Texas Tech University Llano River Field Station (TTU-LRFS)	Riparian Team Member: Assist with program development, marketing, and delivery.

Part II – Project Information							
Project Type							
Surface Water	X	Groundwater					
Does the project implement recommendations made in (a) a completed WPP, (b) an adopted TMDL, (c) an approved I-Plan, (d) a Comprehensive Conservation and Management Plan developed under CWA §320, (e) the <i>Texas Coastal NPS Pollution Control Program</i> , or (f) the <i>Texas Groundwater Protection Strategy</i> ?				Yes	X	No	
If yes, identify the document.	Buck Creek Watershed Protection Plan; Eight Total Maximum Daily Loads for Indicator Bacteria in Dickinson Bayou and Three Tidal Tributaries; Geronimo and Alligator Creeks Watershed Protection Plan; Implementation Plan for One Total Maximum Daily Load for Bacteria in Gilleland Creek; Fifteen TMDLs for Indicator Bacteria in Watersheds of the Lake Houston Area; Pecos River Watershed Protection Plan; Plum Creek Watershed Protection Plan; Draft San Bernard River Watershed Protection Plan; Oso Bay and Oso Creek – A TMDL Project for Bacteria; Three Total Maximum Daily Loads for Chloride, Sulfate, and Total Dissolved Solids, Petronila Creek Above Tidal, Segment 2204; Upper San Antonio River Watershed Protection Plan; Orange County Watersheds – A TMDL Project for Bacteria, Dissolved Oxygen and pH; Upper Oyster Creek – A TMDL Project for Bacteria and Dissolved Oxygen; Lampasas River Watershed Protection Plan: Implementation Plan for Seventeen Total Maximum Daily Loads for Bacteria in the Greater Trinity River Region; Leon River Watershed Protection Plan; Concho River Watershed Protection Plan; One Total Maximum Daily Load for Bacteria in Peach Creek; Lower San Antonio: A TMDL for Bacteria; Cypress Creek Watershed Protection Plan; Clear Creek TMDLs: Bacteria.						
If yes, identify the agency/group that developed and/or approved the document.	Buck Creek Watershed Partnership facilitated by Texas Water Resources Institute and TSSWCB; TCEQ, University of Houston, and CDM; The Geronimo and Alligator Creeks Watershed Partnership facilitated by GBRA, Texas AgriLife Extension Service and TSSWCB; TCEQ and the Lower Colorado River Authority; The City of Denton in cooperation with CH2M HILL, Texas A&M University, and the University of North Texas; TCEQ and James Miertschin & Associates, Inc.; Landowners and entities in the Pecos River watershed, facilitated by AgriLife Extension, TWRI and TSSWCB; Plum Creek Watershed Partnership facilitated by Texas AgriLife Extension Service and TSSWCB; Houston-Galveston Area Council and TCEQ; Center for Coastal Studies at Texas A&M University, Corpus Christi and TCEQ; Nueces River Authority and TCEQ; Nueces River Authority, City of Corpus Christi Water Department, and TSSWCB; San Antonio River Authority, Bexar Regional Watershed Management Partnership, and TCEQ; Sabine River Authority and TCEQ; TCEQ, TSSWCB, Houston-Galveston Area Council; Texas AgriLife Blackland Research and Extension Center and TCEQ; North Central Texas Council of Government's Environment and Development Department and TCEQ			Year Developed	2012; 2012, 2012, 2007, 2008; 2011; 2008; 2008; 2011; 2006; 2007; 2012; 2006; 2007; 2014; 2008; 2013

Project Narrative

Problem/Need Statement

Riparian degradation is a major threat to water quality, in-stream habitat, terrestrial wildlife, aquatic species, and overall stream health. Conversely, proper management, protection, and restoration of riparian areas decrease bacteria, nutrient, and sediment loadings to water bodies; lower in-stream temperatures; improve dissolved oxygen levels; improve aquatic habitat; and ultimately improves macrobenthos and fish community integrity. In Texas, the water quality assessment indicates NPS pollution contributes to approximately 45 percent of the water quality impairments to rivers and streams and 48 percent of the water quality impairments to lakes in Texas. The continuation of the *Texas Riparian and Stream Ecosystem Education* program TSSWCB #12-07 would continue outreach across Texas through online methods, landowner workshops, conferences, and professional trainings.

To improve the management of these sensitive and vital ecosystems, riparian education programs are needed regarding the nature and function of riparian zones, their benefits, and BMPs for protecting them. This will not only reduce NPS pollution, it will provide tremendous ecosystem service benefits and direct economic benefits to the community.

The State of Texas has more than 192,000 miles of rivers and streams that, along with closely associated floodplain and upland areas, comprise corridors of great economic, social, cultural, and environmental value. These riparian corridors are complex ecosystems that include the land, plants, animals, and network of streams within them. They perform a number of ecological functions such as modulating stream flow, storing water, removing harmful materials from water, and providing habitat for aquatic and terrestrial plants and animals. Simply put, the health of riparian systems is paramount to stream health. Proper management of riparian areas will protect banks and reduce erosion rates of stream banks and sediment into the streams and reservoirs. Riparian vegetation functions to slow down the overland flow, capture sediment, nutrients, other pollutants and organic matter as well as allowing for increased infiltration in the flood plain/riparian area. Higher levels of runoff increase the chances for pesticides, fertilizers, and fecal matter to reach streams and worsen water quality (TWDB, 2013). When management activities leave very little or no vegetation, resulting in stream banks being more susceptible to incision and/or widening of the stream (Zygo, 1997). As a stream incises, it may become disconnected and flood the riparian area less frequently or not at all, greatly affecting the ability for water to infiltrate and deposit sediment and nutrients. This results in a loss of forage production, wildlife habitat, and recreational value. In-stream habitat for fish and other aquatic species is also lost as these creeks deepen and widen. In addition, landowners may suffer as more and more land erodes and falls into the stream, ultimately causing acreage loss and affecting their property value and future economic opportunities.

Poor management leads to high sediment loads carried by streams that reduce water storage capacity in reservoirs

where the sediment is deposited. Studies have shown that poorly managed stream banks can account for as much as 85% of the sediment contributed in a watershed (Wynn and Mostaghimi, 2006). The Texas Water Development Board (2009) calculated that the Richland-Chambers Reservoir in Navarro County loses 2,065 acre-feet of water capacity every year for a total loss of 43,361 acre-feet in the 20-year period since 1987, when it was impounded. Consequently, enough sediment has accumulated during that 20-year period to cover the bottom of the 43,384-acre reservoir to a depth of one foot. Texas A&M University researchers estimate that 84% of the sediment reaching the reservoir every year is from channel and stream bank erosion (Wang et al. 2010).

In Texas as a whole, it is estimated that major reservoirs lose 90,000 acre-feet of water storage capacity every year due to sedimentation, which is roughly equal to the amount of water that 180,000 families use in one year (TWDB, 2007). At this rate, the Texas Water Development Board estimates that by 2060, approximately 4.5 million acre-feet of reservoir capacity will be lost due to sedimentation, which is more than the capacity that would be gained through the construction of new major reservoirs (TWDB, 2007). This agency reported that dredging costs twice as much or more than constructing a new reservoir, making it impractical in many cases (TWDB, 2005). Therefore, focusing management efforts on quality land management to stabilize stream banks and riparian areas may be one of the most cost effective strategies for extending the operational life of the state's water supply reservoirs.

Streams and riparian zones reflect the sum of impacts of natural and man-induced disturbances of drainage areas or watersheds. Management of the land, streams, and riparian zones affects not only individual landowners, but also livestock, wildlife, aquatic life and ecosystem services for everyone downstream. By understanding the processes, key indicators and impacts of disturbances, activities that hinder recovery, landowners and other citizen-stakeholders can evaluate these systems and improve their management to produce desired conditions.

Changes within a surrounding ecosystem (e.g., watershed) will impact the physical, chemical, and biological processes occurring within a stream corridor. Stream systems normally function within natural ranges of flow, sediment movement, temperature, and other variables, in "dynamic equilibrium." Over the years, human activities have contributed to changes in the dynamic equilibrium of stream systems. These activities have manipulated stream corridor systems for a wide variety of purposes, including domestic and industrial water supplies, irrigation, transportation, hydropower, waste disposal, mining, flood control, timber management, recreation, aesthetics, and fish and wildlife habitat. Increases in human population along with industrial, commercial, and residential development place heavy demands on stream corridors. The cumulative effects of these activities result in significant direct and indirect changes, not only to stream corridors, but also to the ecosystems or watersheds they are located in. The direct changes include degradation of water quality, decreased water storage and conveyance capacity, loss of habitat for fish and wildlife, and decreased recreational and aesthetic values. While the indirect changes are harder to quantify such as air quality, decomposition of wastes, and other ecosystem services we all take for granted, there is direct economic benefits that can be calculated. Many cities, such as Austin, have found that improving creek and floodplain protection is needed to prevent unsustainable public expense to maintain drainage infrastructure.

Benefits of healthy riparian/stream systems:

- High quality habitat for both aquatic and riparian species
- Dissipation of flood energy and reduced downstream flood intensity and frequency
- Higher, longer-lasting and less variable baseflow between storm events
- Deposition of sediment in the floodplain, stabilizing it and maintaining downstream reservoir capacity longer
- Debris and nutrient use and filtering in the floodplain to improve water quality and dissolved oxygen levels in the aquatic system
- Riparian vegetation canopies to shade streams and reduce their temperatures, providing a food base for aquatic and riparian fauna
- Fewer invasions of exotic undesirable riparian species
- Higher biodiversity than terrestrial uplands

- “Stabilized” banks, which reduce erosion and protect ownership boundaries
- Increased economic value through wildlife, livestock, timber, and recreational enterprises
- Improved rural land aesthetics and real estate values

The continuation of the *Texas Riparian and Stream Ecosystem Education* program TSSWCB #12-07 would continue outreach across Texas through online methods, landowner workshops, conferences, and professional trainings. This program has held workshops across the state in impaired watersheds

Riparian education workshops have been offered in the past by agencies such as Texas A&M AgriLife Extension Service (e.g. Trinity River basin), Texas A&M AgriLife Research (e.g. Lampasas River), TRA, and most recently the Nueces River Authority and TPWD utilizing NRCS experts as instructors. TWRI has coordinated a Riparian Team with agencies and experts across the state that are working on riparian issues and or conducting trainings so that there is some coordination to reach more across the large state of Texas. A successful workshop format has already been established and field tested. Feedback from these workshops has been very positive. Further, TPWD has initiated a statewide riparian education effort targeting areas where there are additional habitat programs. This program will continue to coordinate closely with TPWD on both delivery and content to ensure landowners throughout the state are provided a consistent message of riparian enhancement and protection. The Texas A&M Research and Extension Center in Dallas is conducting stream restoration workshops. Additionally, groups like the Stream Teams coordinated by Texas A&M AgriLife Research at Blackland Research and Extension Center and the North Central Texas Council of Governments and USEPA-R6 were focused on providing technical assistance through consultations and recommendations, informal project review and ordinance review, and also worked to improve public awareness of the benefits of healthy streams and riparian areas through a geomorphology training workshops directed to local officials, city engineers, developers and consultants. The funding for these Stream Team efforts ended several years ago, but the structure is still in place to provide technical assistance as needed.

Riparian management is an important component of the Lone Star Healthy Streams program (TSSWCB 09-06 and 12-08). However, riparian management is not the focal point of Lone Star Healthy Streams which specifically targets BMPs for addressing bacteria contributions to streams (of which proper riparian management is one); but, it does not focus on the broader perspective of the nature and function of riparian zones (fluvial geomorphology, hydrology, vegetation) or the benefits and direct economic impacts from ecological services of healthy riparian zones.

Unfortunately, these programs cannot comprehensively meet the diverse needs of the entire state, and in many cases they lack funding to continue efforts even at the local scale. An evaluation of the NRA Riparian Network by Oregon State University concluded that barriers to continued program operation and improvements included limited staff time and availability to support the program, a limited number of riparian experts in the region available to facilitate workshops, and lack of secure funding. Chief among these barriers was the lack of a continuous, dedicated funding source.

There was a critical need to create synergy between the framework established by these programs and efforts. This initial project has created this synergy and built off of these successful local programs to establish the State’s mechanism to deliver riparian education in high priority watersheds. The Riparian Team has linked agencies and universities across the state in partnership and a cohesive effort. This program will continue to implement a riparian education program to support and enhance riparian management and water quality protection efforts by all agencies and organizations actively engaged in watershed planning across Texas. This program will continue to benefit watershed efforts regardless of constituent targeted or whether the watershed is urban or rural. Further, by protecting these ecologically sensitive riparian areas, communities will be able to improve water quality while maintaining healthy ecosystems, providing wildlife habitat, opportunities for outdoor recreation and enhanced ecosystem services.

Project Narrative

General Project Description (Include Project Location Map)

TWRI will continue to coordinate the Riparian Team for this project that is composed of TFS, ESSM, TPWD, NRCS, TRA, NRA, TTU-LRFS, TSSWCB, TCEQ and others to assist with program development, marketing, and delivery. TWRI will expand on riparian trainings conducted in targeted watersheds (Fig. 1) and provide access to the program through web-based outreach and tools. TWRI will organize instructor teams for each event, composed of members of the Riparian Team, contractors, and others as needed to deliver the Riparian Education Programs.

The riparian workshops will continue to partner with and have expert instructors from the Riparian team at each training program. The basic existing framework established the past trainings conducted from the initial project (TSSWCB #12-07) will be utilized and expanded upon where possible. The morning session will include registration and pre-test, followed by indoor classroom style presentations. During lunch additional presentations may be provided that relate to the issues and/or landscape for the area, and local watershed planning effort update. The afternoon training session will be outside at one or more stream locations, where participants can see in the field firsthand the vegetation and functions they learned about in the classroom setting. One group will perform the stream walk instruction and the other will have additional discussions/presentations about stream functions and dynamics, flooding, etc. Each group will then switch and conduct the other task.

The program will be adapted to meet local needs. For example, the program will be adapted in coordination with the Riparian Team for urban areas as needed. TFS will continue to be integral for both adapting the program and delivering it in East Texas. Due to logging activities in this region and specific requirements placed on such operations, the program will be adapted in coordination with the TFS to meet the needs of landowners and issues these logging areas and ensure consistency with existing logger training programs. Further, TFS is the recognized expert in Texas with regards to bottomland hardwood forests and their vegetation and management. As these bottomland forests are vital to riparian protection and improvements, the TFS expertise will be needed to ensure the program retains the needed expertise to appropriately manage these critical systems. TFS has also developed an urban riparian forestry presentation.

To help market the program and further expand the reach of the program, presentations of varying length (15/30/45/60 min.) will be updated as needed and delivered to audiences throughout the state through county Extension programs, watershed stakeholder meetings, Clean Rivers Program Basin Steering committees, and other venues. These presentations will be available for delivery by anyone on the Riparian Team. Additionally, key elements and messages will be incorporated into presentations delivered by the TFS Program Coordinator, TWRI, and others on the Riparian Team throughout the state to generate greater interest in riparian protection efforts and increasingly expand requests for the program and its resources. TWRI will evaluate the potential use of stream rapid bioassessment techniques with volunteer citizen scientists to investigate potential benefits of this method of awareness. It is anticipated that this will continue to greatly increase program momentum and concurrently initiate implementation of riparian protection concepts by landowners, setting the stage for greater improvements in riparian habitat, stream stability, and water quality.

The program will coordinate with the TFS, NRCS, TRA, River Authorities, universities, local soil and water conservation districts (SWCDs), County Extension Agents (CEAs), and particularly the TPWD and its riparian programs. TWRI will coordinate Riparian Team meetings/teleconferences for planning workshops approximately every 6 months.

Riparian Landowner Trainings. Riparian landowner trainings (daylong, approx. 7 or more annually) will focus on the nature and function of riparian zones (fluvial geomorphology, hydrology, vegetation), the benefits and direct economic impacts from ecological services of healthy riparian zones, BMPs for enhancing and protecting riparian zones, and technical and financial resources and incentives available for implementing riparian BMPs and riparian protection

measures. Riparian education programs will cover an introduction to riparian principles, watershed processes, basic hydrology, erosion/deposition principles, riparian vegetation, potential causes of degradation and possible resulting impairment(s), and available local resources including technical assistance and tools that can be employed to prevent and/or resolve degradation. Existing resources and guides will be used for these trainings; however, where possible, regional information and curriculum will be developed. The goal is for participants to better understand and relate to riparian and watershed processes, the benefits that healthy riparian areas provide, and the tools that can be employed to prevent and/or resolve degradation and improve water quality. As a part of the training, participants will be educated on the importance of riparian protection activities. TWRI will evaluate the potential use of stream rapid bioassessment techniques with volunteer citizen scientists to investigate potential benefits of this method of awareness. A major goal of the program will be to foster implementation of riparian BMPs. Training will also emphasize the need for watershed planning that supports maintenance of a natural hydrograph. Restoration of riparian areas degraded by changes to the natural hydrologic regime must be conducted in concert with efforts to remedy those upstream disturbances. At the conclusion of the training, participants will receive a certificate of completion.

TWRI and the Riparian Team will work in coordination with state and local organizations to select and schedule locations for the riparian education programs. Priority will be given to agencies and organizations currently involved in WPP or TMDL processes and those planning future watershed efforts. Subsequently, additional watersheds will be selected based on impairment status, environmental sensitivity, and/or other priority issues. Due to the size of many watersheds in the state and in an effort to enhance outreach, riparian education programs, in both urban and rural settings, may be offered multiple times and at different locations within prioritized watersheds. In coordination with project partners approximately seven workshops will be offered each year in the highest priority watersheds.

Two Statewide Riparian Conferences will be held to provide additional riparian information to those interested. These may be held in conjunction with the TRA, professional societies, River Authorities, other institutes, etc. These conferences will continue the momentum began by previous conferences held in conjunction with this first grant 12-07 including the Southwest US Stream Restoration Conferences in 2013 and 2014 in San Antonio, Texas Riparian Association Annual Meeting 2013, and the Urban Riparian Symposium in 2015.

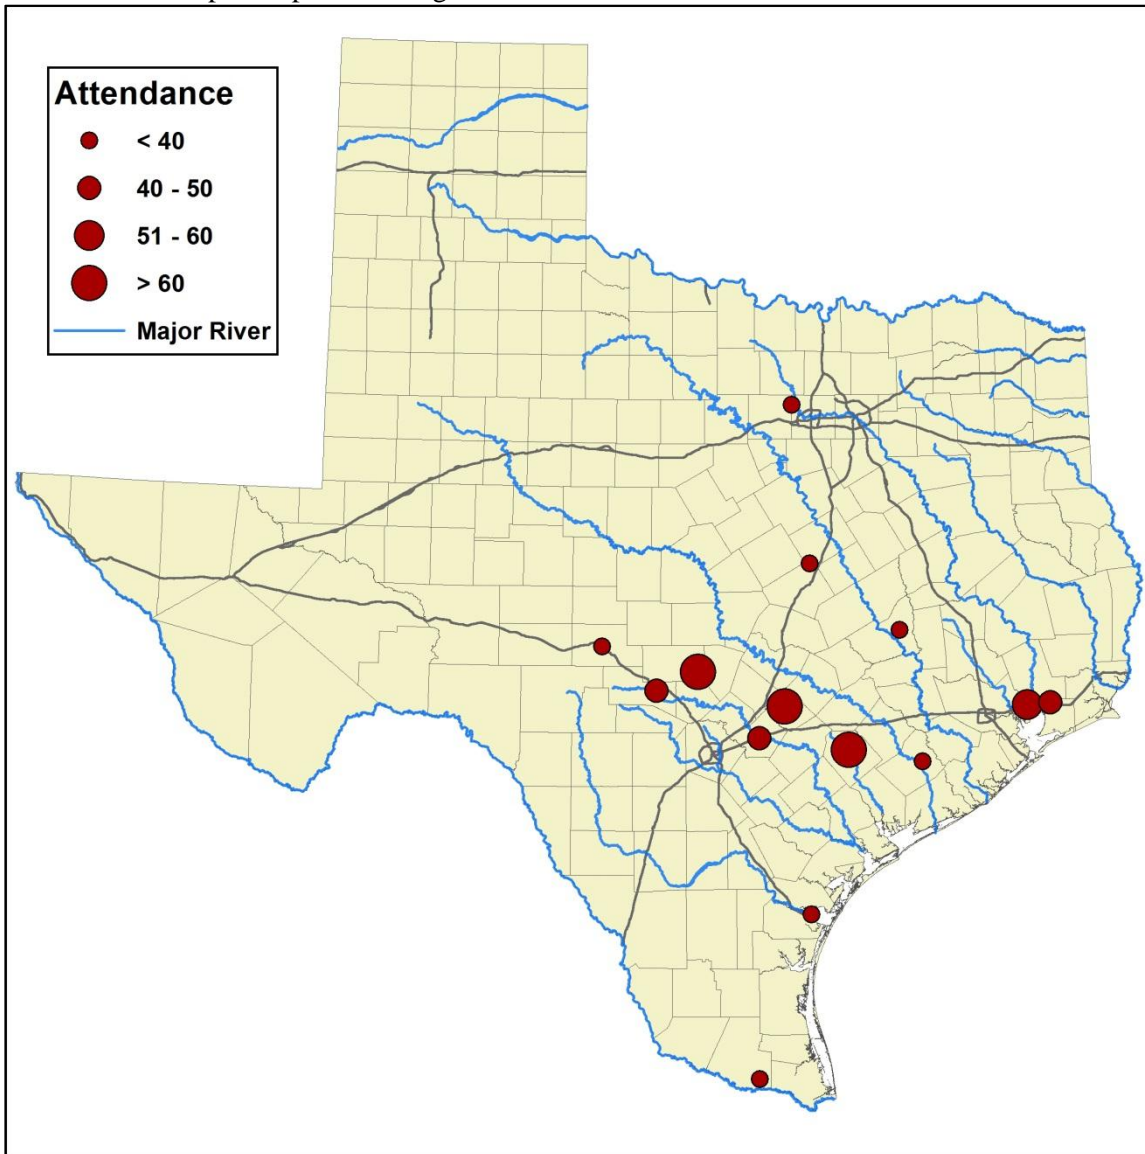

Evaluation and Assessment. The trainings will include an evaluation component to assess program effectiveness and to modify and enhance curriculum content to achieve project goals. A two-stage evaluation approach will be used to measure both knowledge and behavior changes of individuals participating in the program.

Stage 1. A pre-/post-test evaluation strategy will be implemented at the beginning and end of both the face-to-face educational program and web-based training program. The pre-test will ask knowledge-based questions and post-test will measure the same knowledge-based questions to determine the knowledge increase of participants. In addition, the post-test will include 'satisfaction' questions and 'intentions to change or adopt' questions.

Stage 2. A post follow-up assessment instrument will also be sent to participants via email to complete the assessment and ascertain what practices were actually adopted several months after participating in the program.

Results will be summarized in a project final report. Briefs also may be developed to document and enhance the success of future riparian education and similar training programs.

Figure 1. *Texas Riparian and Stream Ecosystem Education* program map identifying location and participation in fourteen workshops completed through December 2014.

Tasks, Objectives and Schedules						
Task 1	Project Administration					
Costs	Federal	\$55,968	Non-Federal	\$41,110	Total	\$97,078
Objective	To effectively administer, coordinate and monitor all work performed under this project including technical and financial supervision and preparation of status reports.					
Subtask 1.1	TWRI will prepare electronic quarterly progress reports (QPRs) for submission to the TSSWCB. QPRs shall document all activities performed within a quarter and shall be submitted by the 15 th of January, April, July and October. QPRs shall be distributed to all Project Partners.					
	Start Date	Month 1		Completion Date	Month 36	
Subtask 1.2	TWRI and SRS will perform accounting functions for project funds and will submit appropriate Reimbursement Forms to TSSWCB at least quarterly.					
	Start Date	Month 1		Completion Date	Month 36	
Subtask 1.3	TWRI will host coordination meetings or conference calls, at least quarterly, with Project Partners to discuss project activities, project schedule, communication needs, deliverables, and other requirements. TWRI will develop lists of action items needed following each project coordination meeting and distribute to project personnel.					
	Start Date	Month 1		Completion Date	Month 36	
Subtask 1.4	TWRI will attend and participate in meetings, as appropriate, in order to communicate project goals, activities and accomplishments to affected parties. Such meetings may include, but are not limited to, Clean Rivers Program Basin Steering Committees, Texas Watershed Planning Short Course, Texas Watershed Coordinator Roundtables, and the TSSWCB Southeast and South Central Texas Regional Watershed Coordination Steering Committee.					
	Start Date	Month 1		Completion Date	Month 36	
Subtask 1.5	TWRI and TRA will continue to host and maintain (Months 1-36) the http://texasriparian.org website to serve as a public clearinghouse for project-related information and the riparian program website and online RSVP system at http://nrt.tamu.edu/courses/texas-riparian/ . These program websites serve as a means to disseminate information to stakeholders and the general public.					
	Start Date	Month 1		Completion Date	Month 36	
Subtask 1.6	TWRI will develop a Final Report that summarizes activities completed and conclusions reached during the project and discuss the extent to which project goals and measures of success have been achieved.					
	Start Date	Month 1		Completion Date	Month 36	
Deliverables	<ul style="list-style-type: none">• QPRs in electronic format• Reimbursement Forms and necessary documentation in hard copy format• Lists of action items from project coordination meetings• Project website• Final Report in electronic and hard copy formats					

Tasks, Objectives and Schedules						
Task 2	Coordinate and deliver riparian education programs					
Costs	Federal	\$257,239	Non-Federal	\$133,606	Total	\$390,845
Objective	Deliver riparian education programs to targeted watersheds to promote healthy riparian areas, thus healthy watersheds, by increasing citizen awareness, understanding, and knowledge about the nature and function of riparian zones, their benefits, and BMPs for protecting them and minimize NPS pollution.					
Subtask 2.1	TWRI will continue to coordinate the existing Riparian Team to direct this synergistic project. The Riparian Team includes TWRI, TFS, TPWD, NRCS, TRA, NRA and TTU-LRFS. The Riparian Team will continue to assist with program development, marketing, and delivery. This Riparian Team will serve as the primary pool of instructors to deliver the Riparian Education Program. The Riparian Team will meet as frequently as needed, likely quarterly in year 1 and semi-annually in years 2-3.					
	Start Date	Month 1		Completion Date	Month 36	
Subtask 2.2	TWRI will work in coordination with TSSWCB, TCEQ, TPWD, NRCS, TFS, and other state and local organizations to select locations for the riparian education training events. This project will deliver riparian education programs to targeted watersheds across the state. Priority watersheds will be selected in collaboration with TSSWCB, and with input from TCEQ and others, and primarily represent those with approved WPPs or TMDLs and those developing or planning development of WPPs or TMDLs. Other watersheds may be selected based on need and in response to collaborations with other groups and organizations, including river authorities, SWCDs, local citizen groups/watershed associations, etc. Watersheds will be selected consistent with the State’s implementation of the Texas NPS Management Program. Additional watersheds will be selected based on impairment status, environmental sensitivity, and/or other priority issues. TWRI and TSSWCB will periodically make collaborative decisions to re-prioritize and add to/remove from the list of watersheds.					
	Start Date	Month 1		Completion Date	Month 36	
Subtask 2.3	The TWRI and Riparian Team will continue establishing CEU credits for the riparian education program to encourage participation by landowners and water resource professionals.					
	Start Date	Month 1		Completion Date	Month 36	
Subtask 2.4	TWRI, with assistance of the Riparian Team, will actively market riparian education trainings through news releases (AgriLife News and local media outlets), internet postings, listserv, facebook, newsletter announcements, public/conference presentations, flyers, etc., to enhance awareness and utilization. TSSWCB must review and approve all project-related content in any materials prior to distribution.					
	Start Date	Month 3		Completion Date	Month 36	
Subtask 2.5	TWRI, with assistance of the Riparian Team, will deliver 24 riparian education training events in prioritized watersheds (Subtask 2.2) during the project period with approximately 8 per year. Certificates of completion will be provided to all participants in the trainings.					
	Start Date	Month 6		Completion Date	Month 36	
Subtask 2.6	TWRI in collaboration with the Riparian Team will update a series of riparian education presentations of various lengths (15/30/45/60 min.) and provide them to a variety of audiences and venues statewide such as those listed in Subtask 1.4, but also including county and multi-county Extension programs, landowner workshops, SWCD programs, and other suitable venues. Further, key elements of the program will be incorporated into presentations delivered by TFS, TWRI, and others on the Riparian Team and delivered to a variety of audiences throughout the state.					
	Start Date	Month 3		Completion Date	Month 36	
Subtask 2.7	TWRI will coordinate two statewide riparian conferences in coordination with the Texas Riparian Association, professional organizations, River Authorities, or other entities annual meetings.					
	Start Date	Month 13		Completion Date	Month 36	

Deliverables	<ul style="list-style-type: none"> • Summaries of Riparian Team meetings and action items • Standardized presentations of various lengths • CEU credits for Program • Periodically updated list of specific watersheds where riparian education trainings have been and will be implemented • Schedules, agendas, and attendance lists for riparian education trainings and statewide conferences • Collection of press releases, newspaper articles, newsletters, public information statements, etc., as developed and disseminated
--------------	---

Tasks, Objectives and Schedules						
Task 3	The Texas A&M Forest Service’s role in the Riparian and Ecosystem Education Program.					
Costs	Federal	\$44,817	Non-Federal	\$61,123	Total	\$105,940
Objective	Participate on Riparian Team and assist with planning program development, marketing, and delivery of riparian landowner programs, annual conferences, and other trainings as appropriate.					
Subtask 3.1	TFS will participate on Riparian Team by attend meetings/conference calls and reviewing program materials.					
	Start Date	Month 1		Completion Date	Month 36	
Subtask 3.2	TFS will assist with development, marketing, and delivery of riparian landowner programs, annual conferences, and other trainings. TFS will update Forestry and Urban presentations as appropriate for 15 trainings.					
	Start Date	Month 1		Completion Date	Month 36	
Subtask 3.3	TFS will assist by providing information for quarterly progress reports, annual reports, and final reports.					
	Start Date	Month 1		Completion Date	Month 36	
Deliverables	<ul style="list-style-type: none">TFS will be an instructor/speaker at 15 events.TFS will assist with quarterly, annual and final reports.					

Tasks, Objectives and Schedules						
Task 4	Evaluate the effectiveness of the riparian education trainings.					
Costs	Federal	\$41,976	Non-Federal	\$30,832	Total	\$72,808
Objective	To measure both knowledge and behavior changes of individuals participating in the program.					
Subtask 4.1	TWRI will conduct pre- and post-training evaluations to assess increased knowledge of participants on the nature and function of riparian zones, their benefits, and BMPs for protecting them and minimize NPS pollution; to evaluate participant satisfaction with the program; and to evaluate participant’s intentions to change their behavior as a result of the program. Evaluate the potential of rapid stream bioassessments by volunteer citizen scientists and the benefit of this additional method. Additionally, TWRI will deliver a follow-up assessment via email post follow-up to ascertain behavior changes actually adopted by participants.					
	Start Date		Month 1		Completion Date	
Subtask 4.2	TWRI will analyze results obtained from the pre-/post-tests and post follow-up assessment using descriptive, correlational, and analysis of variances statistical procedures. Results will be used to periodically evaluate and modify riparian education program materials and incorporated into the final report.					
	Start Date		Month 1		Completion Date	
Deliverables	<ul style="list-style-type: none">• Pre-/post-test evaluations for the watershed education programs• Follow-up assessments for the watershed• Results from the evaluations					

Project Goals (Expand from Summary Page)
<ul style="list-style-type: none"> • Facilitate the promotion of healthy watersheds and improve water quality through the delivery of riparian and stream ecosystem education programs with a focus on priority watersheds via group trainings. • To increase citizen awareness, understanding, and knowledge about the nature and function of riparian zones, their benefits, and BMPs to protect them and minimize NPS pollution. • To enhance riparian education and outreach across the state through online methods to establish a larger, more well-informed citizen base working to improve and protect local riparian and stream ecosystems. • To connect landowners with local technical and financial resources to improve management and promote healthy watershed and riparian areas on their land.

Measures of Success (Expand from Summary Page)
<ul style="list-style-type: none"> • Deliver a minimum of 24 riparian education programs in prioritized watersheds • Coordinate 2 statewide riparian conferences • Increased knowledge and understanding of riparian function and implementation of BMPs by individuals participating in the program, as measured by pre-/post-tests and 6-month follow-up assessment

2012 Texas NPS Management Program Reference (Expand from Summary Page)
Components, Goals, and Objectives
<p>Component 1 – Explicit short- and long-term goals, objectives and strategies that protect surface...water</p> <p>LTG: To protect and restore water quality from NPS pollution through assessment, implementation and education</p> <ol style="list-style-type: none"> 1. Focus NPS abatement efforts ...and available resources in watersheds identified as impacted by NPS pollution. 2. Support the implementation of state, regional, and local programs to prevent NPS pollution through assessment ...and education. 4. Increase overall public awareness of NPS issues and prevention activities. <p>STG Three – Education: Conduct education and technology transfer activities to help increase awareness of NPS pollution and prevention activities contributing to the degradation of waterbodies... by NPS.</p> <ul style="list-style-type: none"> • Objective A – Enhance existing outreach programs at the state, regional, and local levels to maximize the effectiveness of NPS education. • Objective B – Administer programs to educate citizens about water quality and their potential role in causing NPS pollution. • Objective F – Implement public outreach and education to maintain and restore water quality in water bodies impacted by NPS pollution.
Component 2 – Working partnerships...to appropriate, state,...regional, and local entities, private sector groups, and federal agencies.
Component 3 – Balanced approach that emphasizes both statewide NPS programs and on-the-ground management of individual watersheds

EPA State Categorical Program Grants – Work plan Essential Elements
